Search Type:

File Search

Validation

The File Search allows visitors to search the bio-optical archive for in situ measurements of apparent and inherent optical properties, phytoplankton pigment concentrations, and other oceanographic and atmospheric data. Search results return a list of matching data files which may be viewed, downloaded, mapped and plotted. Data access and use are governed by the SeaBASS [Data Access Policy](#).

The following search settings are very broad by default. Edit these parameters if you want to limit or refocus the results. [More info](#).

General Search Parameters:

Measured between the dates of and Archived between the dates of and
